October 2009 – Code No. 08'09

**ICE Europe 2009
Munich, 24 – 26 November
Hall 3, Stand 27**

**Windmüller & Hölscher Debuting at the
International Converting Exhibition ICE**

Forthcoming International Converting Exhibition ICE 2009 in Munich will see for the first time the German machine manufacturer Windmüller & Hölscher with an information stand. Windmüller & Hölscher, leading manufacturer of machinery and equipment for flexible packaging and globally operating enterprise, can look back on 140 years of successful operation. The company offers a well-matched range of machines that is unique in both its breadth and depth. W&H experts from all product sectors will be available at the information stand to furnish visitors from the trade with details about the innovative technical solutions made by W&H.

Be it for the printing of paper, plastic film or composite structures, W&H offers an extensive selection of C.I. flexo printing presses and gravure printing machines – customized productivity solutions for most different requirements. Both flexo and gravure printing presses can be equipped with supplementary systems for in-line lamination and lacquer coating and cold seal application. Add to this, W&H offers the VARICOATER LF,

a high capacity laminating machine for flexible packaging materials using solvent-free adhesives to ensure an environmentally safe, energy efficient and cost effective laminating process.

For the conversion of paper, plastic films and plastic woven fabric, the W&H portfolio also encompasses sack, bag and carrier bag making machines as well as FFS systems for highly efficient PE bag forming, filling and sealing in a single pass.
